MILO — KBC Pitch

Belgium's Cross-Retailer Consumer Panel — Powered by Cashback & AI

3-Minute Pitch — DeepmAInd B.V.

The Problem

[0:00 – 0:30]

Trade marketing leaders at mid-market Belgian food brands face a critical blind spot:

- **No data on cross-retailer performance** — Trade marketing budgets (€200k–€500k annually for mid-size brands) are spent mostly on gut feel
- **Legacy tools are too expensive** — Nielsen and Kantar home-scanner panels cost €50k–€150k/year and take weeks to analyse
- **No real-time answers** — A brand running a promotion at Delhaize has no way to see if they're cannibalizing sales at Colruyt until weeks later

Result: Millions in promotional budget wasted because brands cannot answer simple questions like:

- Which retailer actually drives profit?
- Are my promotions working?
- Where are customers switching?

The Concrete Solution

[0:30 – 1:15]

Real-World Example: A Belgian Sauce Brand

The Situation:

- Sells across Delhaize, Colruyt, and Carrefour
- Spends €250,000 annually on promotions
- No idea which promotions drive real ROI

What MILO Shows (in Real-Time):

- Promotion at **Carrefour:** Generates volume BUT no repeat purchases (bouncing buyers)
- Promotion at **Colruyt:** Lower volume BUT high customer loyalty
- **Private label switching:** Losing 12% of customers to store brands after promotions end

The Action Plan (Based on MILO Data):

- Shift **€80,000** from Carrefour to Colruyt (loyalty drives lifetime value)
- **Test price adjustment** at Delhaize instead of pure discount
- **Design new format** to reduce private-label switching

The Result:

- Improved promotional ROI by 18% ($45k annual savings)
- Increased repeat purchase rate by 7%
- **MILO Cost: €12,000/year** → Pays for itself 3.75x over

How MILO Works

[1:15 – 1:45]

Consumer Side (The Data Engine)

- Gamified cashback app: real grocery receipts from Belgian shoppers
- Weekly personalized promotions report
- AI assistant for shopping insights
- Result: 50,000+ engaged consumers → rich, real-time panel

B2B Side (The Revenue Engine)

- **AI-powered dashboard** → No data scientists needed
- **Instant answers:** "How did my promotion perform at each retailer?"
- **Retailer cannibalization analysis** → See hidden profit leaks
- **Source of volume** → Know exactly which competitor lost share

---

Business Model & Revenue

[1:45 – 2:30]

Who Pays & Why

Decision Maker: Trade Marketing Manager or Category Manager at mid-market FMCG brands

When They Need It:

- **Promotion planning** — Before launching, model expected ROI
- **Mid-campaign** — Optimize budget allocation in real-time
- **Post-campaign** — Measure true impact on share and loyalty

Current Budget Allocation: €15k–€25k annually for market intelligence (Nielsen panel subscriptions or industry reports)

Pricing Model

MILO Dashboard Subscription: €12,000–€18,000/year per brand

- Based on number of SKUs tracked (€400–€600 per SKU/year)
- Includes: real-time dashboard + weekly reports + AI support

Syndicated Reports: €3,000–€5,000 per custom deep-dive

Justification: Brands typically recover the investment within 4-6 weeks through better promotion ROI

Why This Works Today

[2:30 – 2:50]

✓ **Huge pain point:** Mid-market brands are data-starved but have real budgets to spend
✓ **Price gap:** Nielsen/Kantar ignore mid-market; MILO fills the gap at 10x lower cost
✓ **Real urgency:** Every brand is running promotions **right now** — they need better data immediately
✓ **Proven ROI:** Even small improvements in promotional efficiency justify the cost

---

The Ask & Why KBC

[2:50 – 3:00]

Raising: Seed round

Immediate Goal: Land 3–5 pilot partners (Spadel, Lotus, Vandemoortele) with documented case studies proving 15%+ ROI improvement

Why KBC:

- Deep relationships within Belgian FMCG industry
- Can open doors to pilot partners and validate our model at scale

Not another loyalty app. We are building **Belgium's independent trade marketing intelligence layer.**
