Three-Sentence Summary

MILO is an AI-powered iOS application that combines receipt scanning, proprietary health scoring, and spending intelligence into a single platform — creating an entirely new category of "wellness-aware spending analytics." The company generates revenue through a three-pillar model: B2C subscriptions (35%), B2B data monetization (52%), and analytics reports (13%), projecting $2.4M in Year 3 revenue with 58% operating margins under conservative assumptions. With $400K-$600K in seed funding, MILO targets 25,000 monthly active users by Year 3 and a minimum $15M valuation at exit.
