MILO

Consumer Panel & Market Intelligence Platform for Belgian FMCG

A free panelist app that rewards consumers for submitting digital grocery receipts.
Two B2B data products that give brands the market intelligence they've never had.

1. Executive Summary

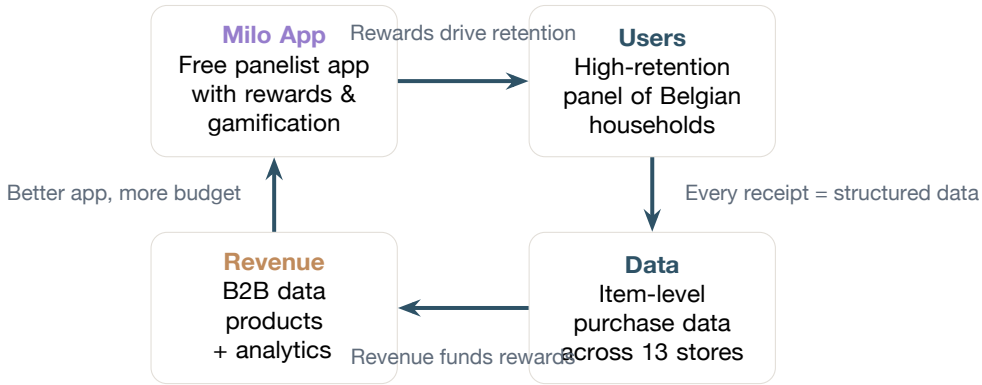
The Thesis: Belgian consumers have no tool that turns grocery receipts into granular spending and health insights. Belgian FMCG brands have no affordable source of cross-retailer market data. **Milo solves both problems with one platform** — a free panelist app that collects the data, and a B2B product that monetizes it.

Milo is a consumer panel and market intelligence platform for the Belgian grocery industry. Through a **completely free** mobile app, Belgian consumers submit their digital grocery receipts in exchange for real euro cashback rewards, while gaining item-level spending analytics, nutritional health scoring, and an AI financial coach. On the B2B side, this receipt data is matched to real product EANs via Daltix and aggregated into **two core data products**: `mart_sku_performance` (22 metrics at the EAN × store × month grain) and `mart_brand_switching` (a brand-to-brand transition matrix per category). Clients open these in Excel and pivot/filter — giving them the cross-retailer competitive intelligence that didn't exist at an accessible price point.

The Milo app is not just a data collection tool — it is a **full-featured consumer product** with a sophisticated gamification engine that drives long-term panelist retention. Because the app is entirely free, there is zero friction to adoption. This creates a self-reinforcing flywheel: better app → more panelists → richer data → more B2B revenue → more reward budget → better app.

100%	2	22	3,900+	0
Free Consumer App	Data Products	SKU Performance Metrics	Potential B2B Clients	Affordable Cross-Retailer Alternatives

1.1 The Platform Flywheel



1.2 Revenue Architecture

Revenue Stream	Price Range	Description
SKU Performance Data	€149–799/mo	`mart_sku_performance`: 22 metrics at EAN × store × month grain
Brand Switching Data	€199–599/mo	`mart_brand_switching`: loyalty & switching matrix per category
Multi-Category Bundles	€380–4,500/mo	3, 5, or 8 category bundles with volume discount
Ad-Hoc Research	€2K–8K/project	Custom analysis on demand
Retailer Partnerships	Variable	Coupon sponsorship and promoted deal placements

2. The Market Opportunity

2.1 Two Markets, One Platform

Milo addresses two distinct market failures simultaneously:

Consumer Problem		B2B Data Problem
Expense trackers show "€45 at Colruyt" — never *what* you actually bought. No app combines item-level spending, health, AI coaching, and real cashback rewards.	MILO SOLVES BOTH	99% of Belgium's 3,979 food companies[2] have zero cross-retailer consumer data. YouGov costs €100K+/yr.[3] Retailer data is siloed. No one offers SKU-level switching data.
5.2M Belgian households[1] with no granular grocery spending tool		**3,500+ companies**[2] priced out of market intelligence entirely

2.2 The Consumer Market

Belgian consumers are underserved by financial tracking tools. Bank-connected apps (like Cake, Bankin') only show merchant-level aggregates — "€45.23 at Colruyt" tells you nothing about what you actually bought. **No app on the Belgian market** provides:

- **Item-level spending analytics** — which products, at what price, in what category
- **Nutritional health scoring** of grocery purchases
- **AI-powered financial coaching** with full purchase history context
- **Real cashback rewards** (€0.50+ per receipt) that fund the habit
- **Personalized deal recommendations** based on actual purchase history

Post-inflation awareness (12–15% food inflation in Belgium, 2022–2023[4]) has created unprecedented demand for grocery budgeting tools. The Milo app meets this demand while building the data asset that powers the B2B business.

2.3 The B2B Data Gap

FMCG brands in Belgium are **flying blind**. They sell through Colruyt, Delhaize, Carrefour, Aldi, and Lidl — but have no idea who buys their products, how often, or what happens at competing retailers.

Data Source	Cross-Ret.?	Pur-chase?	Afford-able?	SKU?	Switch-ing?	Basket?
YouGov[3]	Yes	Yes	No (€100K+)	Yes	Partial	Yes
Colruyt Insights[7]	No	Yes	Unknown	Yes	No	Yes
Delhaize Enlight+[8]	No	Yes	No	Yes	No	Yes
Carrefour Links[9]	No	Yes	No	Yes	No	Yes
Shopmium[13]	Yes	Biased	N/A	No	No	No
Milo	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**

Retailers monetize their *own* data but will **never share cross-retailer data**. Colruyt will never tell a brand what happens at Delhaize. This competitive dynamic is permanent and creates a structurally defensible market position for Milo.

2.4 Total Addressable Market

Segment	Potential €/yr	Companies	Key Buyers
B2B Data Products			
Belgian SMB food producers[2]	€3.6M–8.4M	3,400+	Artisanal producers, local brands
Mid-size Belgian brands	€3.6M–14.4M	50–100	Lotus, La William, Imperial
Market research agencies	€0.6M–1.8M	20–30	Belgian/EU research firms
Retailer commercial teams	€0.9M–4.8M	3–5	Colruyt, Delhaize, Carrefour
Retailer partnerships	€0.5M–2M	5–10	Coupon sponsorship, promoted deals
Total TAM	**€9M–32M**	**3,500+**	

3. The Milo Panelist App

Core Principle: The Milo app is **completely free** and designed to be a product consumers *love using* — not a bare-bones data collection tool. The richer the consumer experience, the higher the retention, the more consistent the data panel, and the more valuable the B2B product. Zero cost to the user means zero friction to adoption.

3.1 Product Overview

Attribute	Detail
App Name	Milo
Pricing	Completely free — no subscriptions, no paywalls
Platforms	iOS (native SwiftUI) — Android planned
Target Market	Belgium (primary), Netherlands & France (expansion)
Languages	English, Dutch (Nederlands), French (Français)
Supported Stores	13 Belgian/Dutch grocery chains — Colruyt, Delhaize, Carrefour, Lidl, Aldi, Albert Heijn, Okay, Intermarché, Spar, Bio-Planet, Action, Kruidvat, Jumbo
Design	Dark-mode exclusive, glass-morphism UI, spring physics animations
AI Engine	Google Gemini for receipt extraction, item parsing, and categorization

Milo turns grocery receipts into actionable financial and nutritional insights through AI, while rewarding panelists with real euro cashback for every receipt — completely free, forever.

3.2 Core Feature Set

Digital Receipt Import & AI Extraction

- **Share Extension** — upload digital receipts directly from Photos, Files, Safari, or email without opening the app
- Direct import of digital receipts (e-receipts, email receipts, PDF receipts)
- AI-powered extraction: store name, date, all line items, quantities, unit prices
- Smart categorization into **34 categories across 8 groups** (Fresh Food, Pantry, Frozen, Drinks, Snacks, Household, Personal Care, Other)
- Duplicate detection with confidence scoring
- Item normalization — standardizes brand names across receipts
- Async processing with push notification on completion

Spending Analytics & Budget Management

- Monthly spending dashboard with interactive donut/pie charts — category and store breakdowns with tap-to-drill-down
- Budget setting with per-category allocation and real-time pace indicators (On Track / Slightly Over / Over Budget)
- Projected end-of-month spend based on current pace
- Store breakdown — spending per supermarket with visit frequency
- Year-in-Review — annual summary with monthly trends, top categories, top stores
- 12 months of data cached locally for instant navigation

Food Health Scoring

- Nutri-Score-style rating (0–5 scale) for every grocery item
- Aggregate health scores per receipt, per category, per month, and all-time
- Health score distribution — percentage breakdown of very healthy to very unhealthy purchases
- Trend tracking — monitor if dietary habits improve over time

No competitor combines financial tracking with nutritional scoring. Milo bridges the gap between personal finance and health apps.

AI Chat Assistant — "Milo"

A conversational AI assistant with full access to the user's purchase history, powered by streaming Server-Sent Events for real-time responses.

- "What can I cook with what I bought this week?" — Recipe suggestions from imported groceries
- "Predict my spending this month" — Spending forecasts based on historical patterns
- "Track price of [product]" — Price history analysis across stores
- "How healthy are my purchases?" — Nutritional insights and recommendations
- Animated dachshund mascot (Milo) as chat avatar, drawn in real-time with SwiftUI Canvas

AI-Powered Deals & Promotions

- Weekly personalized deal recommendations based on actual purchase history
- "Top Picks" — specific products on sale at the user's preferred stores
- "Smart Switch" — AI identifies when switching brands saves money on the same product
- Store-specific branding with each retailer's brand colors
- Direct links to store promotional folders

Additional Features

- **Expense Splitting** — split any receipt among up to 8 people with per-item assignment and shareable summaries
- **Apple Wallet Integration** — create digital loyalty cards for any grocery store via PassKit
- **Multi-language support** — English, Dutch, French with full localization
- **Share Extension** — upload from any app without opening Milo

4. User Engagement & Retention Engine

Why This Matters: The value of the B2B data product depends entirely on panel quality — consistent, representative receipt submission behavior over time. The gamification system is not a "nice to have"; it is the **core mechanism** that keeps users submitting week after week, month after month.

4.1 The Reward Stack

Every receipt submission triggers a cascade of reward events designed to create **variable-ratio reinforcement** — the same psychology behind the most engaging consumer products:

Base Reward: €0.50+ per receipt (up to €0.75 at Diamond tier)

Guaranteed cash into virtual wallet on every receipt

Mystery Bonus: 25% chance of extra cash, 10% chance of free spin

Revealed via animated 3D card flip — surprise mechanics drive excitement

Spin Wheel: €0.20 to €1,000 jackpot per spin

Physics-based animation with haptic feedback — 1 to 5 spins per receipt based on tier

Streak Bonus: Escalating rewards for consecutive weekly submissions

€0.50 to €1.50+ cash bonuses every 4th consecutive week

4.2 Monthly Tier System

Users progress through tiers based on monthly receipt volume, unlocking increasing rewards:

Tier	Receipts/Month	Cash Multiplier	Spins/Receipt	Per-Receipt Value
Bronze	0–4	1.0×	1	€0.50 + 1 spin
Silver	5–7	1.1×	2	€0.55 + 2 spins
Gold	8–11	1.25×	3	€0.625 + 3 spins
Diamond	12+	1.5×	5	€0.75 + 5 spins

Diamond-tier users submit 12+ receipts per month — exactly the frequency needed for statistically robust panel data. The tier system aligns user incentives with data quality requirements.

4.3 Retention Moats

The gamification system creates five interlocking retention mechanisms that make leaving the app psychologically costly:

Moat	Mechanism
Wallet balance	Users accumulate real euro value they don't want to abandon. Redeemable for store coupons at Lidl, Colruyt, Delhaize, Aldi, Carrefour, Albert Heijn.
Streak history	Consecutive-week submission streaks create "loss aversion" — losing a 12-week streak feels costly. "At Risk" warnings trigger re-engagement.
Badge collection	12 achievement badges (First Receipt, Streak milestones, Lucky Spin, Jackpot, etc.) create sunk-cost attachment.
Purchase history	Months/years of spending data that cannot be rebuilt elsewhere. Year-in-Review features reinforce value.
AI context	Milo's recommendations improve with more data — the AI assistant becomes more valuable the longer you use it.

4.4 The Coupon Store — Closing the Loop

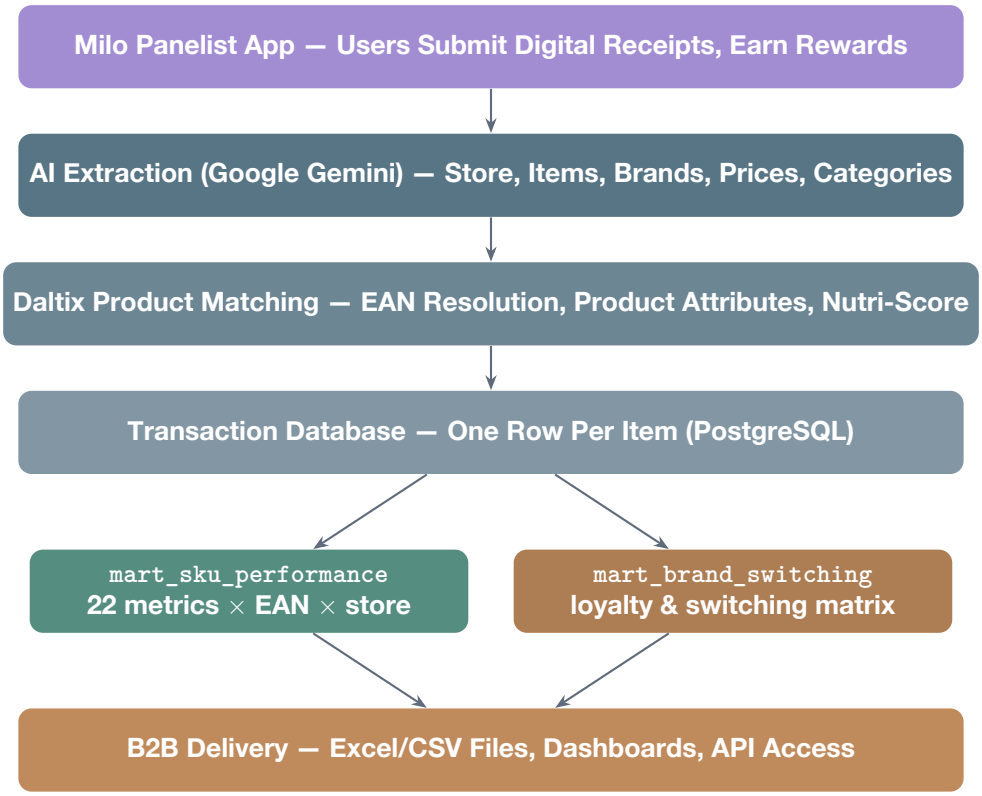
Virtual wallet earnings are redeemed for **real store discount coupons**:

- Store-specific coupons for Lidl, Colruyt, Delhaize, Aldi, Carrefour, Albert Heijn
- QR code payload for in-store redemption
- "My Coupons" section tracks owned and redeemed coupons
- At scale, coupon costs are offset by **retailer partnership agreements** — retailers subsidize coupon distribution in exchange for user traffic

5. The Milo B2B Data Platform

5.1 From Receipts to Market Intelligence

Every receipt submitted through the Milo app feeds the B2B data pipeline. The AI extraction produces structured transaction data, which is then **matched to real product EANs via Daltix** and aggregated into two complementary data products.



5.2 Data Product 1: `mart_sku_performance` (The Core Product)

The core data product. Grain: **year_month** × **EAN** × **store_name**. Clients open this in Excel and pivot/filter using the included dimension attributes. Only includes Daltix-matched transactions (`ean IS NOT NULL`).

22 metrics across 6 categories:

Category	Metrics
Shopper	unique_buyers, panel_size, penetration_pct, purchase_frequency, avg_basket_spend, repeat_buyer_pct
Volume	total_spend, total_units, avg_spend_per_buyer
Share	category_share_pct, brand_share_in_store_pct, sku_share_of_brand_pct
Pricing	avg_paid_price, avg_shelf_price, price_gap_pct, avg_price_per_volume
Promo	promo_share_pct, avg_promo_depth_pct, promo_volume_uplift, promo_types
Quality	total_transactions, avg_match_confidence

Dimension attributes included for pivoting: product_name, brand_name, manufacturer, is_private_label, granular_category, parent_category, group_name, pack_size, pack_unit, nutri_score, retailer_group, store_type, is_discounter.

For hard discounters, `sku_resolution_type = `representative'` rows use a representative EAN with `represented_eans` showing all possible variants.

5.3 Data Product 2: `mart_brand_switching` (Brand Loyalty & Switching Matrix)

A brand-to-brand transition matrix tracking how consumers move between brands within each category. Grain: **year_month** × **granular_category** × **from_brand** × **to_brand**.

Reading the matrix: row = from_brand, column = to_brand. Diagonal = loyalty (repeat buyers). Off-diagonal = switching (brand changers).

Category	Metrics
Switching	switcher_count, total_switches, switch_share_pct, reverse_switch_count, net_flow
Loyalty	loyalty_rate_pct, avg_days_between_repeat
Cannibalization	intra_brand_switch_count, intra_brand_switch_pct
Value	avg_from_price, avg_to_price, price_direction, switched_spend
Promo	promo_driven_switch_pct, post_promo_retention_pct

5.4 What Makes Milo Data Unique

1. **SKU-level granularity via Daltix matching** — actual EAN codes, not just brand-level. Enables pack-size analysis, variant comparison, and true product-level performance tracking.
2. **Actual prices paid** — not shelf prices. What consumers actually paid, including discounts and promotions. The `price_gap_pct` metric quantifies the gap.
3. **Cross-retailer promo tracking** — promo_share_pct, promo_depth, and promo_volume_up-

lift show exactly how promotions perform across different retailers.

4. **Brand switching intelligence** — the only affordable source of brand-to-brand switching data in Belgium. Shows where consumers go when they leave your brand, and why.
5. **Full-basket context** — what's bought together reveals basket affinity and cross-purchase patterns.
6. **High-quality panel** — Milo users submit frequently because they genuinely use the app, not just for minimal rewards. Quality is tracked via `avg_match_confidence`.

5.5 Example: What the Data Answers

A Belgian beer brand director asks: "Are we losing share to private label?"

From `mart_sku_performance`: Based on our panel of 5,000 Belgian households: **Yes, but only at Aldi.** Jupiler holds 38% value share at Colruyt (stable), 34% at Delhaize (stable), but dropped from 22% to 16% at Aldi. Cara Pils grew from 31% to 39% at Aldi in the same period. The shift is price-driven: avg_paid_price for Jupiler at Aldi is €14.99/crate vs. Cara Pils at €9.99.

The same beer brand director asks: "Where are my lost customers going?"

From `mart_brand_switching`: In the Beer Pils category at Aldi, the Jupiler → Cara Pils row shows: switcher_count = 340, switch_share_pct = 62%, promo_driven_switch_pct = 78%. But post_promo_retention_pct is only 23% — meaning most switchers return after the promo ends. **Recommendation:** The switching is promo-driven and largely temporary. Focus on matching promo timing rather than permanent price cuts.

An SMB pasta sauce maker asks: "I want to get listed at Colruyt. What should I know?"

From `mart_sku_performance`: Premium pasta sauce (>€3.50/jar) has a penetration_pct of 14% at Colruyt — but growing +2pt/quarter. Private label holds category_share_pct of 39%, Barilla 21%. There's a gap for a Belgian artisanal brand at €4–5. The avg_promo_depth_pct for the category is 18%, suggesting moderate promo activity. Without our data, this producer walks into Colruyt with nothing but a product sample and hope.

6. Category Data Subscriptions

6.1 How It Works

Clients subscribe to the **product categories they compete in**, choose their **data depth tier**, and select which **data products** they need:

Pick Categories (1, 3, 5, or all 8) + Choose Depth (Market Pulse to Full Intelligence) + Add Products (SKU Performance + Brand Switching) = **Your Subscription**

6.2 Eight Category Domains

#	Category Domain	Includes	Granu-lar Cat.	Potential Clients
1	Dairy, Eggs & Cheese	Yoghurt, Milk, Cheese, Butter, Eggs, Cream	~30	320+
2	Bakery & Cereals	Bread, Pastry, Cereals, Muesli, Baking	~25	280+
3	Meat, Fish & Deli	Fresh meat, Charcuterie, Fish, Plant-based	~20	220+
4	Beverages	Beer, Wine, Spirits, Soft Drinks, Coffee, Tea	~35	580+
5	Pantry & Cooking	Sauces, Pasta, Rice, Oils, Condiments, Spices	~30	450+
6	Snacks & Confectionery	Chocolate, Chips, Biscuits, Candy, Nuts	~25	380+
7	Frozen & Ready Meals	Frozen meals, Frozen veg, Pizza, Ice cream	~15	180+
8	Household & Personal Care	Cleaning, Detergent, Skincare, Pet Food	~20	220+
	Full Market Access	**All 8 category domains combined**	**~200**	**3,900+**

6.3 Four Data Depth Tiers

Depth Tier	Per Category	What You Get
Market Pulse	€149/mo	Top-line metrics from `mart_sku_performance` across all retailers combined. Category size, penetration, growth trends, top brands, private label share.
Retailer View	€299/mo	Everything in Market Pulse, broken down by retailer and store. Full SKU-level granularity with all 22 metrics per EAN × store.
Brand Intelligence	€499/mo	Retailer View + `mart_brand_switching`: brand-to-brand transition matrix, loyalty rates, promo-driven switching, net flow analysis.
Full Intelligence	€799/mo	Everything above + private label deep-dive, pricing analytics (price_gap_pct, promo_depth), demographic breakdowns, cross-purchase patterns.

6.4 Bundle Pricing

Bundle	Discount	Market Pulse	Full Intelligence	Ideal For
Single Category	—	€149/mo	€799/mo	SMB brands
3 Categories	15% off	€380/mo	€2,037/mo	Mid-size brands
5 Categories	25% off	€559/mo	€2,996/mo	Diversified producers
Full Market (8)	40% off	€715/mo	€3,835/mo	Retailers & agencies

Key insight: A small Belgian cheese maker can access SKU-level cross-retailer dairy intelligence for €127/month (annual Market Pulse) — including actual EAN performance, pricing analytics, and promo effectiveness. Previously, the minimum entry point for any cross-retailer data was €100,000+/year.[3] We reduce the barrier by **98.5%**.

7. Target Clients & Market Reach

7.1 Client Summary

Category Domain	SMBs	Mid-Size	Enterprise	Total
Dairy, Eggs & Cheese	250	50	20	320
Bakery & Cereals	200	55	25	280
Meat, Fish & Deli	155	45	20	220
Beverages	430	100	50	580
Pantry & Cooking	320	90	40	450
Snacks & Confectionery	275	70	35	380
Frozen & Ready Meals	110	45	25	180
Household & Personal Care	140	50	30	220
Total	**1,880**	**505**	**245**	**2,630**
Cross-category + agencies + retail	—	180	95	275
Grand Total (unique)				**3,900+**

7.2 Named Target Clients

Enterprise Targets (€2,000–8,000/mo)

- AB InBev Belgium
- Danone Belgium
- Coca-Cola Europacific
- Nestlé Belgium
- Mondelez / Côte d'Or
- Procter & Gamble
- Unilever Belgium
- Colruyt Group (PL)
- Delhaize (commercial)
- Lotus Bakeries
- FrieslandCampina
- Henkel Belgium

Mid-Size Targets (€500–2,000/mo)

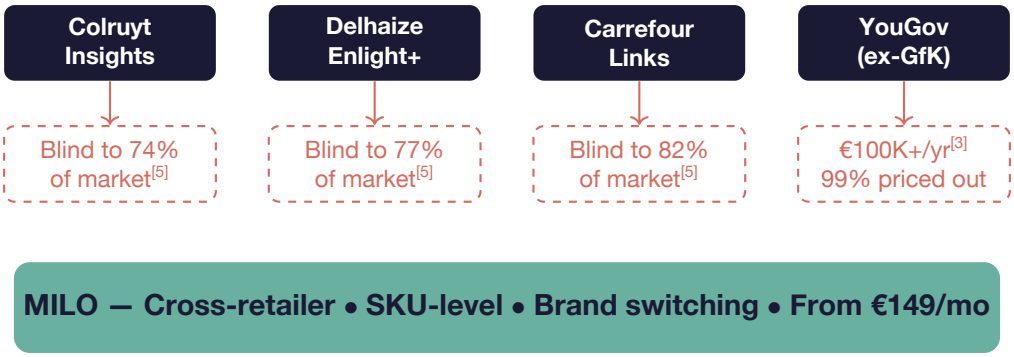
- Devos-Lemmens
- La William
- Imperial Meat Products
- Duvel-Moortgat
- Alken-Maes
- Ter Beke
- Vandermoortele
- Spadel / Bru
- Ecover
- Leonidas
- Milcobel
- Greenyard

SMB Targets — €149–499/mo (the underserved majority)

- 350+ craft breweries
- 150+ cheese makers
- 120+ chocolate producers
- 80+ sauce producers
- 60+ meat processors
- 50+ biscuit brands
- 40+ organic startups
- 35+ coffee roasters
- Plant-based brands

8. Competitive Landscape

8.1 The Structural Gap



8.2 Panelist App Competitive Advantages

Feature	Milo	Bankin'	Cake (BNP)	Toshl	Shop-mium
Item-level data	Yes	No	No	No	Partial
Health scoring	Yes	No	No	No	No
AI assistant	Yes	No	No	No	No
Cash rewards	€0.50+	No	No	No	Per product
Deals engine	Yes	No	No	No	Yes
BE grocery focus	13 stores	Generic	No	Generic	Partial

8.3 12 Competitive Advantages (Combined)

1. **Free panelist app:** Zero cost to the user eliminates adoption friction. B2B data revenue funds the entire operation.
2. **Cross-retailer view:** Colruyt, Delhaize, Carrefour, Lidl, Aldi — all in one dataset. Retailers will *never* share this with each other.
3. **SKU-level via Daltix matching:** Real EAN codes, not just brand-level. Enables pack-size and variant analysis that brand-level panels cannot provide.
4. **Brand switching matrix:** The only affordable source of brand-to-brand transition data in Belgium — loyalty rates, promo-driven switching, net flow.
5. **Per-category pricing:** No competitor offers modular, per-category subscriptions. All-or-nothing everywhere else.
6. **Actual prices paid:** Not shelf prices — what consumers actually handed over, including discounts. The `price_gap_pct` metric quantifies the difference.
7. **AI-powered insights:** Both consumer-facing (Milo chat) and B2B-facing (analytics dashboards).

8. **Belgium-specific depth:** 13 store chains, 3 languages, Belgian grocery taxonomy. The specialist advantage.
9. **SMB-accessible:** 10–100× cheaper than YouGov/GfK for the most-valued KPIs.[3]
10. **Compounding data moat:** Historical data becomes more valuable every month. First-mover advantage in cross-retailer data.

8.4 Comparable Companies

Company	Model	Scale	Key Insight for Milo
Fetch Rewards (US)	Receipt rewards + data	$2.5B+ valuation[10]	11M receipts/day proves the model
Ibotta (US)	Receipt rewards + data	$367M rev (2024)[11]	Publicly traded (IPO Apr 2024); audience segments
Foxintelligence (FR)	E-receipt panel	Acquired by NIQ[12]	EU receipt data proven valuable
Shopmium (FR/BE)	Cashback + data	10M+ downloads[13]	Nielsen partnership; biased panel
NielsenIQ Byzzer (US)	SMB data platform	Part of $3.5B NIQ[14]	US-only; no EU equivalent exists

9. Technology & Architecture

9.1 Technical Stack

Consumer App — Native iOS (SwiftUI) • Android (Planned)

Auth & Identity — Firebase Auth (Email, Google, Apple Sign-In)

API Layer — FastAPI (Python 3.11) on Railway

AI Engine — Google Gemini (Extraction + Categorization)

Product Matching — Daltix EAN Resolution + Product Attributes

Database — PostgreSQL on Railway (Operational + Analytical)

B2B Delivery — `mart_sku_performance` + `mart_brand_switching` via Excel/CSV

9.2 iOS App Architecture

Component	Technology
Framework	SwiftUI with MVVM architecture
Concurrency	@MainActor ViewModels, Actor-based services for thread safety
Share Extension	App Group data sharing for receipt import from any app
Caching	Disk-backed caching — 12 months of data cached locally
Preloading	Multi-phase data preloading on app launch (4 parallel phases)
In-App Purchases	StoreKit 2 integration (ready for future coupon marketplace)
Wallet	PassKit for Apple Wallet loyalty card integration
AI Chat	SSE streaming for real-time Milo responses
Animations	Spring physics, 3D card flips, confetti particles, haptic feedback

9.3 Backend Architecture

Component	Technology
API Framework	FastAPI (Python 3.11) with async endpoints
Hosting	Railway with separate non-prod and production environments
Database	PostgreSQL with Alembic migrations
AI/ML Pipeline	Google Gemini for extraction → categorization → health scoring
Product Matching	Daltix integration for EAN resolution + product attributes (Nutri-Score, pack size, manufacturer)
Promo Matching	Pinecone vector search for deal personalization
Auth	Firebase Auth token verification

9.4 GDPR Compliance

- **Explicit consent:** Users opt-in to data collection and anonymized data sharing during onboarding
- **Anonymization:** All B2B data products use aggregated, anonymized data. Minimum group sizes of 30–50 per reported cell
- **Right to erasure:** Users can delete all their data at any time
- **DPA compliance:** Aligned with Belgian Data Protection Authority (APD/GBA) requirements
- **Data Processing Agreements:** All B2B clients sign DPAs prohibiting re-identification

10. Go-to-Market Strategy

10.1 Panelist Acquisition (Milo App)

Phase	Users	Strategy
Months 1–2	0–500	Friends & family, social media launch, Belgian food/finance influencers. All users get premium free.
Months 3–4	500–2K	Paid social (Instagram, TikTok targeting Belgian grocery shoppers), university partnerships, referral program (invite → bonus spins)
Months 5–8	2K–5K	App Store Optimization, PR in Belgian media (De Tijd, HLN), Flemish & Walloon content marketing
Months 9–12	5K–10K	Organic growth from word-of-mouth, loyalty program maturity, first viral moments from jackpot winners
Year 2	10K–30K	Multi-channel paid + organic. Android launch doubles addressable market. Referral flywheel.

10.2 B2B Sales (Data Subscriptions)

Phase	Clients	Strategy
Months 5–6	Leads	First sample category reports from real data. Outreach to 15–20 prospects per category. Free category snapshots as lead magnets.
Months 7–9	5–8	First paying subscribers. `mart_sku_performance` as core offering. Datarade listing for inbound leads.
Months 10–12	10–18	Launch `mart_brand_switching` add-on. LinkedIn outreach to brand managers. Industry event presentations (Fevia, SIAL).
Year 2	25–50	Full product suite. Enterprise contracts. Analytics premium pilots. Pre-sales for Netherlands expansion.
Year 3	50–80	Multi-category bundles driving ARPC up. Standard analytics offering. First cross-border data.

10.3 Expansion Roadmap

The app architecture already supports geographic expansion:

- **Netherlands** (Year 2–3): Albert Heijn and Jumbo already in the store list. Dutch language already supported. Natural bridge from Belgian operations.
- **France** (Year 3+): Carrefour and Intermarché already supported. French language already built. Massive TAM.
- **Adding new markets requires:** Store database additions, AI training on new receipt formats, promotional data feeds. Core infrastructure is market-agnostic.

11. Financial Projections

11.1 Cost Structure

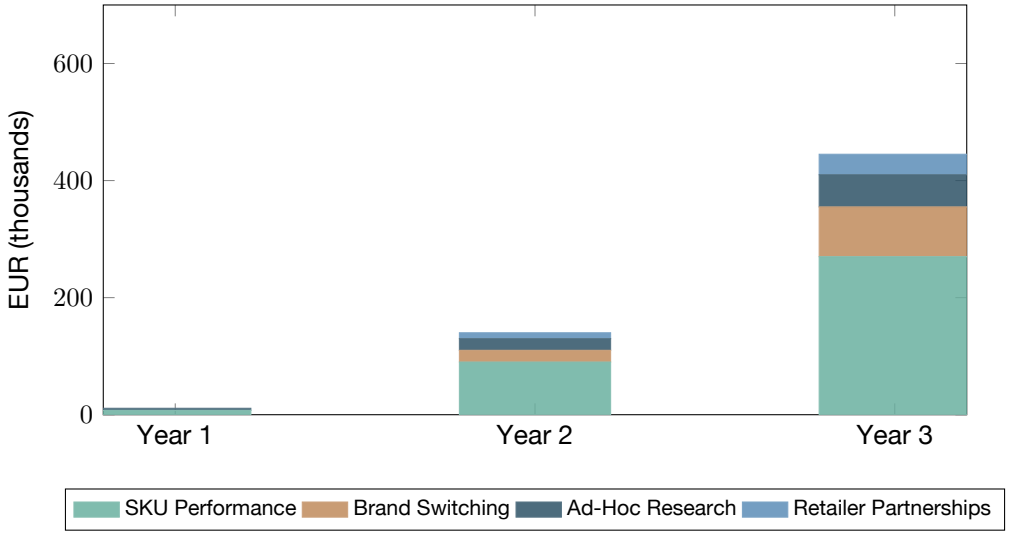
Cost Item	Year 1	Year 2	Year 3
Panelist App Costs			
User rewards (wallet credits)[1]	€15K–25K	€60K–100K	€150K–250K
Coupon redemptions (net)[2]	€8K–15K	€30K–55K	€70K–130K
User acquisition (ads, referrals)	€25K–50K	€30K–50K	€50K–80K
Platform Costs			
Infrastructure (Gemini, Railway, DB)	€4K–6K	€8K–15K	€20K–40K
Sales & marketing (B2B)	€5K–10K	€15K–25K	€30K–50K
Android development	€0	€15K–25K	€5K–10K
Total Costs	**€57K–106K**	**€158K–270K**	**€325K–560K**

[1]Wallet credits earned by users. Actual cash outflow occurs only on coupon redemption.
[2]Net of retailer partnership subsidies (estimated 30–50% of coupon face value at scale).

11.2 Revenue Projections

Revenue Stream	Year 1	Year 2	Year 3
SKU Performance subscriptions	€3K–12K	€50K–130K	€160K–380K
Brand Switching add-on	€0	€10K–30K	€50K–120K
Ad-hoc research	€2K–5K	€10K–30K	€30K–80K
Retailer partnerships	€0	€5K–15K	€20K–50K
Total Revenue	**€5K–17K**	**€75K–205K**	**€260K–630K**
Net (Revenue – Costs)	**-€52K to -89K**	**-€83K to -€65K**	**-€65K to +€70K**

11.3 Revenue Growth Visualization



11.4 Path to Profitability

Break-even point: Late Year 2 to early Year 3 with 30+ paying B2B subscribers and growing retailer partnership revenue. By Year 3, the business approaches profitability with €260K–630K in B2B data revenue. The key lever is B2B client count: each additional client adds high-margin recurring revenue against a largely fixed panel cost base.

11.5 Unit Economics at Scale (Year 3)

Metric	Value	Note
Avg. B2B contract value	€500/mo	Weighted across SMB to enterprise
B2B revenue per panelist	€17–28/yr	Improves with scale
Effective reward cost per user	€7–10/yr*	After redemption rates
Revenue per user (blended)	€14–28/yr	B2B data revenue attributed per panelist
LTV:CAC ratio	**3.5–6×**	At 36-month retention

*Effective cost after accounting for coupon redemption rate (~50–60%) and retailer partnership subsidies.

12. Funding Request

12.1 The Ask: €150,000 – €250,000 Seed Round

Category	Amount	Details
User Acquisition (40%)	€60K–100K	Paid social, influencer partnerships, referral program, App Store marketing
Panel Rewards (25%)	€37.5K–62.5K	Receipt rewards, spin wheel prizes, streak bonuses, coupon funding
Infrastructure (15%)	€22.5K–37.5K	Gemini API, Railway hosting, Firebase, Android development
B2B Go-to-Market (10%)	€15K–25K	Sample reports, Datarade listing, industry events, B2B sales
Working Capital (10%)	€15K–25K	Legal, accounting, contingency
Total	**€150K–250K**	

12.2 18-Month Milestones

Milestone	Target
Month 3	1,000 active panelists; iOS app live in App Store; first 500K receipt items in database
Month 6	3,000 active panelists; first sample category reports; 10+ qualified B2B leads; gamification fully synced to backend
Month 9	5,000 active panelists; 8+ paying B2B subscribers; €3K–5K MRR; Android beta launch
Month 12	8,000 active panelists; 15+ B2B clients; €8K–15K MRR; Netherlands expansion prep
Month 18	15,000+ panelists; 30+ B2B clients; Android live; retailer partnerships active; path to €200K+ ARR

12.3 Alternative & Complementary Funding

- **Vlaio (Flanders):** €25K–50K non-dilutive grants for data/AI innovation projects[19]
- **Innoviris (Brussels):** Up to €100K Proof of Business grants; up to €500K Innovative Starters Award[20]
- **imec.istart:** €50K–200K pre-seed program (6% equity)[21]
- **BeAngels / BAN Vlaanderen:** €50K–100K angel investment
- **FMCG brand partnership:** A mid-size brand funds rewards in exchange for exclusive early data access

- **Pre-sales:** Letters of intent from 5–10 food producers to validate demand

13. Risk Analysis & Mitigation

Risk	Severity	Proba-bility	Mitigation
Insufficient user sign-ups	High	Medium	Multi-channel acquisition; generous rewards; referral program; app quality as differentiator
User churn (stop submitting)	High	Medium	Five-layer gamification (wallet, streaks, tiers, badges, spins); app utility beyond receipt submission
Reward costs exceed revenue	Medium	Medium	Virtual wallet delays cash outflow; retailer partnerships subsidize coupons; adjustable reward rates
Panel not representative	Medium	Medium	Demographic weighting; transparent methodology; Belgium-specific calibration
AI extraction quality issues	Medium	Medium	Monitor brand/category consistency; maintain alias tables; human QA sampling
Slow B2B sales cycle	Medium	Medium	Free sample reports as lead gen; Datarade listing; industry events
App Store rejection	Low	Low	Full compliance with Apple/Google guidelines; no manipulative dark patterns
YouGov drops their price	High	Very Low	Hasn't happened in 60+ years[22]; Milo still 10–100× cheaper
GDPR compliance issues	High	Low	Aggregated data only; explicit consent; DPA alignment; regular audits
Competing receipt app enters Belgium	Medium	Low	First-mover advantage; historical data compounds; deep Belgium-specific features

14. Why Now, Why Belgium, Why Milo

14.1 Why Now

- **AI-powered receipt extraction is now viable:** Google Gemini can extract structured data from receipts with high accuracy at minimal cost — this was not possible even 2 years ago. Combined with Daltix product matching, extracted items resolve to real EAN codes with full product attributes.
- **Post-inflation budget awareness:** Belgian consumers experienced 12–15% food inflation in 2022–2023.[4] Demand for grocery budgeting tools has never been higher.
- **Privacy-first data economy:** With cookie deprecation and GDPR tightening, consumer-permissioned first-party data is the future. Milo is built for this world.
- **No European Byzzer:** NielsenIQ proved the SMB data market is massive, but their affordable product exists only in the US.[14]
- **Mobile-first consumers:** Belgian smartphone penetration exceeds 90%.[15] The infrastructure for digital receipt adoption is universal.

14.2 Why Belgium

- **Concentrated market:** 5 retailers control 85%+ of grocery[5] — efficient to capture the entire market with a panel of 25K–50K households.
- **High PL share (∼40%):**[16] Creates intense data demand from national brands defending share against private label encroachment.
- **Structural data gap:** Retailer data silos + expensive YouGov = a permanent, structurally defensible opportunity.
- **3,979 food companies:**[2] Massive underserved TAM of SMB food producers with zero data access.
- **Trilingual launchpad:** Belgium's Dutch/French/English market provides a natural bridge to the Netherlands and France.

14.3 Why Milo

- **Free panelist model:** A genuinely useful consumer app funds itself through B2B data revenue — no subscriptions, no paywalls, no friction.
- **Product-first approach:** Milo is designed to be a product users love, not a bare-bones data collection tool. This produces better data and higher retention.
- **Unique positioning:** The only affordable, cross-retailer, SKU-level consumer panel in Belgium with brand switching intelligence. No one else occupies this position.
- **Technology-first:** AI-powered extraction from day one. Native iOS with premium UX. Digital receipts only — no camera scanning, no barcode scanning, no manual entry.

- **Capital-efficient:** €150K–250K seed round to reach self-sustaining dual revenue. No need for massive capital raises.
- **Compounding moat:** Every month of data increases the historical value of the dataset. By Month 12, Milo has the only longitudinal cross-retailer dataset in Belgium.
- **Solo founder, full-stack execution:** Product, iOS app, backend, AI pipeline, Daltix integration, data products, and business strategy built by one person. Capital goes to growth, not salaries.

15. Sources & References

All market data and competitive claims in this document are substantiated by the following sources. Numbers marked with superscript references [n] throughout this document correspond to the entries below.

[1] Statbel — "Structure of the Population," January 1, 2025. Belgium had 5,199,324 private households. *statbel.fgov.be*

[2] BoldData — "Top FMCG Companies Belgium," 2025. 3,979 food manufacturing companies in Belgium, 99% SMEs. Corroborated by Fevia (Belgian Food Industry Federation). *bolddata.nl*

[3] YouGov / GfK Consumer Panel Services — Enterprise contracts typically run €100,000+/year. GfK sold its European Consumer Panel business to YouGov in 2023 for €315M. Two-thirds of CPS revenues are recurring, with avg. contract length of 3 years. *business.yougov.com*; Research Live, 2023.

[4] Trading Economics / Statbel CPI — Belgian food inflation peaked at 12–15% in 2022, moderated to 8–10% in 2023, and declined to 0.44% by January 2026. *tradingeconomics.com/belgium/food-inflation*; *statbel.fgov.be*

[5] ESM Magazine / Statista — "Top 10 Supermarket Chains in Belgium." Colruyt Group ~25–26%, Ahold Delhaize ~21–23%, Carrefour ~18%, Lidl ~10%, Aldi ~9%. Combined top-5 exceed 85% market share. Market blindness percentages derived from these shares. *esmmagazine.com*; *statista.com*

[6] NielsenIQ Retail Spend Barometer Belgium — Belgian FMCG market €9.4B quarterly (Q3 2024), implying ~€37–38B annual market. *nielseniq.com*

[7] Colruyt Group Insights — ~3 million households, ~150 million transactions/year from Xtra loyalty card. Only covers Colruyt, OKay, and Spar stores. *insights.colruytgroup.com*

[8] Media Marketing Delhaize (MMD) / Enlight+ — 3M+ SuperPlus loyalty profiles. Transactional data limited to Delhaize stores. Part of Ahold Delhaize (€500M+ group ad/data revenue). *mediamarketingdelhaize.be*

[9] Carrefour Links — 80M customers globally, 8B transactions. Built with Criteo, Google, LiveRamp. Belgium operations cover 2.4M loyalty card consumers. *carrefour.com*; LiveRamp, 2023.

[10] Fetch Rewards — Valued at $2.5B+ (PitchBook, 2024). 12.5M monthly active users, 11M receipts scanned per day, $500M annual revenue run rate. *PRNewswire*, "Fetch Reports Strong Momentum for 2025," 2025.

[11] Ibotta Inc. — Q4/FY2024 Financial Results: $367.3M revenue (+15% YoY). IPO April 2024 (NYSE: IBTA). 50M+ app downloads. *investors.ibotta.com*

[12] Foxintelligence / NielsenIQ — Acquired by NielsenIQ, now integrated as "Digital Purchases by NIQ." Originally 600K-person e-receipt panel across Western Europe. Research Live, 2022. *nielseniq.com*

[13] Shopmium — 10M+ downloads globally (mainly UK/France). Nielsen DaaS partnership for data activation. Data is biased toward promoted products only. *shopmium.com*; CXNetwork;

microsites.nielsen.com

[14] NielsenIQ Byzzer — Self-service platform for small CPG brands, $5K–10K/year. US-only; no equivalent exists in Belgium or Europe. Part of NielsenIQ ($3.5B global revenue). *nielseniq.com/global/en/products/byzzer*

[15] Statista / DataReportal — Belgian smartphone penetration: 92–97% (2024–2025). *statista.com*; DataReportal, "Digital 2025: Belgium."

[16] Statista / RetailDetail EU — Belgian private label food market share ~40%. Belgium has one of the highest PL shares in Europe. *statista.com*; *retaildetail.eu*

[17] IBISWorld / MarketLine — Belgian food & grocery retail market ~€47.9B (2025 estimate). *ibisworld.com*; MarketLine Belgium Food & Grocery report.

[18] Colruyt Group Annual Reports — FY 2024/25 revenue €10.96B (+1.1% YoY). *colruyt-group.com/investor-relations*

[19] VLAIO (Flanders Innovation & Entrepreneurship) — Innovative Starters Support: €50K fixed grant. Development Projects: min. €25K, 25–50% of approved costs. *vlaio.be/en/subsidies*

[20] Innoviris (Brussels) — Proof of Business: up to €100K (50–70% of expenses). Innovative Starters Award: up to €500K per project. Innovation Vouchers: up to €10K. *innoviris.brussels*

[21] imec.istart — €50K cash + €50K convertible loan (up to €200K total) for 6% equity. Ranked #1 university-linked accelerator worldwide (UBI Global). *imecistart.com*

[22] GfK / YouGov historical operations — GfK Consumer Panel Services has operated FMCG household panels across Europe since the 1960s (60+ years). No affordable self-service tier has ever been launched for small brands. Research Live, 2023.

Belgian consumers deserve better grocery insights.

Belgian brands deserve affordable market data.

Milo delivers both.

One free app. One structurally defensible market position.
